

Breach Project: Risk Assessment

Our assessment, conducted using the NIST SP 800-30 framework, identifies and evaluates cyber risks in the medical sector to inform decision makers and support effective risk management.

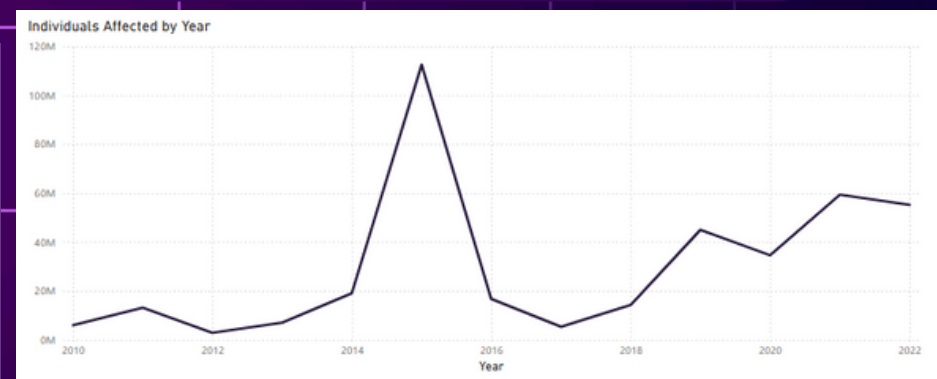

Key Takeaways

- Protect sensitive data at rest and in transit using secure encryption protocols, and establish strict data handling policies.
- Deploy secure email gateways, enable phishing detection, and provide regular training to staff to recognize & report suspicious email activity.
- Perform routine security audits and penetration testing to validate existing controls and continuously improve the organization's security posture.

Biggest Threats

Spear Phishing Emails (Anthem & LSU Health)
Stolen Hardware & Data (Walgreens)
Social Engineering Attacks

Most Common Types of Breaches

Hacking/IT Incidents
Unauthorized Access/Disclosure
Theft

Notable Breaches

Anthem Inc (2015)
LSU Health New Orleans (2020)
Walgreens Recurring Breaches
